

## insure:IT Data Protection Solution

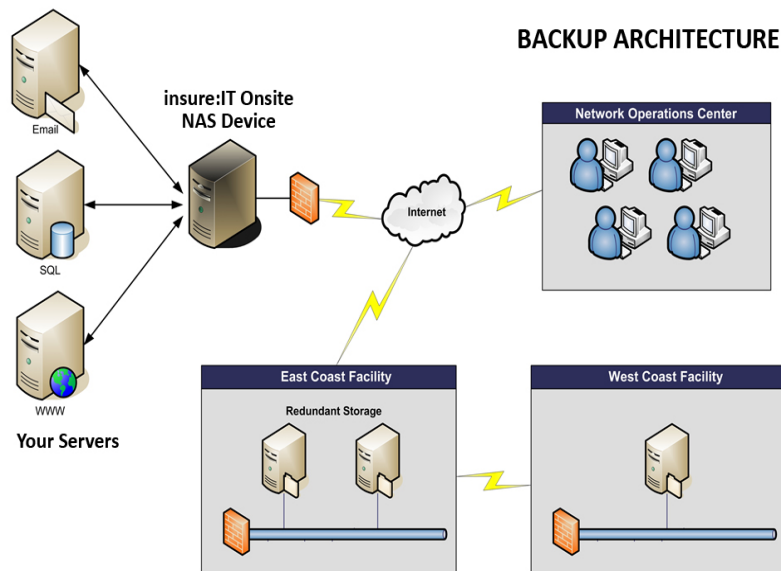

Secure, Enterprise-Class Business Continuity without the Enterprise-Class Price

Now there's a superior data backup & data recovery solution that matches your business needs... and fits within your budget. With fast virtualization capabilities, our NAS device can be configured to function as a standby server if needed. This unique device can also replace labor intensive, error-prone tape backups while providing much more... starting with peace of mind.

### NAS vs. TAPE BACKUPS

Are you still using an unreliable tape backup system? Though tape backup is common, it's far from being an ideal BDR solution. Analysts have said that over half of tape backups fail, so chances are that if you need to restore from tape, you'll be out of luck. But assuming all goes well with tape backup, how does it compare with the NAS appliance?

	TAPE	vs.	NAS
Backup Window	A <b>significant backup window is required</b> to complete a full backup — time lost for access to vital systems.		There is <b>no backup window</b> ...your critical business systems remain up and running.
Recovery Point	Systems are typically <b>backed up every 24 hours</b> . Are you ready to lose a day's worth of work?		<b>Data snapshots take place every 15 minutes</b> ...about the same length of time as a coffee break.
Recovery Time	There's nothing automatic about restoring with tape. The process is <b>time-consuming and labor intensive</b> .		Recovery is as simple as pushing a few buttons (or clicking a mouse). <b>Systems are restored in less than a half hour</b> .

### Keeps Downtime to a Minimum

Our insure:IT solution is a comprehensive Data Backup & Data Recovery solution for Windows 2000 & Windows 2003 servers. This reasonably priced, all-encompassing solution for small-to-midsize businesses provides:

- Very frequent data backups (as frequent as every 15 minutes) with an onsite NAS Device
- Optional offsite data storage at highly rated data centers
- The ability to restore downed servers in less than 30 minutes!
- Advanced data restore options (file and folder levels) with Exchange message and mailbox recovery
- Bare-metal restorations to dissimilar hardware
- Low monthly cost to insure business continuity

### Low Monthly Service Fees

The insure:IT service includes everything in one monthly service fee – All preventative maintenance, patching and updating, monitoring and unlimited Help Desk calls for backup status. This means you'll never pay another support charge for keeping your backups running smoothly. Note that data restores are billed according to your normal Support Agreement. And since we own the hardware, you're protected from obsolescence. Call us today to find out how you can protect your business from data disasters.
